SCREENING

SCREENING SOLUTIONS THAT BOOST YIELDS AND MINIMIZE LOSSES

Screening is a vital step in bulk material-processing. It ensures a consistent size and quality in end products and removes fines and other unwanted pieces from the wood chip supply chain, making onward processing more efficient.

Bruks Siwertell offers a number of screening options depending on processing needs. By ensuring that oversized pieces are separated from a load, our screening systems can eliminate material handling problems and any unnecessary downstream damage or inefficiency to wood-processing equipment or other machinery.

Our effective screening equipment maximizes a wood-processing plant's yield by minimizing losses and optimizing production efficiency.

ALL PRODUCTS IN THIS CATEGORY:

- [Disc scalping screen](#)
- [Gyratory free swinging screen](#)
- [Medium thickness screening system](#)
- [Vibratory screens](#)
